EAR ACUPUNCTURE
for Dogs and Horses

auriculo.org

INTROS and OUTRO

| | INTRO I The background of auriculotherapy | INTRO II The evolution of auriculotherapy |
|----------------|---|--|
| Content | <p>At first glance, ear acupuncture makes a confused and not very purposeful impression on many: all the cards are somehow different, the schools contradict each other. This does not exactly make a therapeutic approach credible.</p> <p>How did it come to this? The answer lies in the - to a large extent - unknown originals according to P. Nogier.</p> | <p>How was auriculotherapy developed? Given the detailed, precise localizations of the representations of all major body structures and organs on the ear, this is one of the crucial questions for understanding auriculotherapy.</p> <p>Where did this come from? How did this come about?</p> <p>P. Nogier's journey of discovery led him through many key discoveries and new localization techniques to the goal of completing the method of ear acupuncture after more than 20 years....</p> |
| Lectons | <ul style="list-style-type: none"> • Ear acupuncture vs. auriculotherapy • The original basics of auriculotherapy • Why are all the auriculotherapy charts so different? • Books and charts according to the originals of P. Nogier | <ul style="list-style-type: none"> • How were the ear somatotopes developed? • The phases I to VI From the cauterization scar to the localization of the nervous system. • The evocation techniques from the pressure tolerance to the RAC |
| Length | 40 min | 1 h |
| Notes | <p>On the one hand, it is said - and rightly so - that point localization in auriculotherapy should be precise. On the other hand, this is exactly where the biggest differences in books and schools lie.</p> <p>In our training we adhere 100% to P. Nogier. It was P. Nogier himself who developed the somatotopes of the ear to the greatest possible differentiation, precision and completeness. This should be the reference by which one can then assess differences in maps and schools.</p> | <p>Knowing the history of the discovery and development of the ear somatotopes by P. Nogier, we can later understand and weigh all diagnostic and therapeutic methods with a better understanding. By knowing the spectrum of different technical methods that P. Nogier used, we also get some visionary hints on further testing possibilities that we might want to use ourselves in the future.</p> |

MAIN MODULES

| | MODULE I Musculoskeletal system | MODULE II Internal organs, cardiovascular system, endocrine system | MODULE III Nervous system |
|----------------|--|--|---|
| Content | This module is about the use of auriculotherapy in musculoskeletal disorders. In this context, the main techniques of diagnosis and therapy are also presented. On the basis of typical indications we illustrate a classical treatment scheme. | This module is about the use of auriculotherapy in disorders of the internal organs and the endocrine system. We revisit the various diagnostic and therapeutic methods in their special relation to these systems. Using examples, we also present classical treatment concepts here. | Auriculotherapy also has great potential in disorders of the central and peripheral nervous system. This most complex of all body systems also presents itself as the most difficult in the ear. We show simple, pragmatic approaches how we can nevertheless use this potential. |
| Lectons | A Localizations B Diagnosis C Therapy D Functional points E Examples/ Indications | A Localizations B Diagnosis C Therapy D Functional points E Examples/ Indications | A Localizations B Zones of influence C Examples/ Indications |
| Length | 2 h 30 min | 1 h 30 min | 1 h 10 min |
| Notes | The use of auriculotherapy in musculoskeletal disorders is the most common (human medicine). The somatotope can be grasped quickly, the localizations are easily accessible. There are simple treatment schemes that are universally applicable. | The use of auriculotherapy in disorders of the internal organs is less common (human medicine), because you have to deal a little more with their localization on the ear. The use in disorders of the endocrine system is rather rare, because the subject itself - regardless of auriculotherapy - is left out by many therapists. | The use of auriculotherapy for disorders of the peripheral and especially the central nervous system is still very rare today. The ear somatotope of the nervous system was co-developed by a neurologist and is visionary and forward-looking. At the same time, the CNS and the vagal system are increasingly becoming the focus of attention for many diseases, even for complementary therapists, so that this area of application will become important in the future. |

Complementary modules

| | COMPLEMENT I Diagnostic and therapeutic methods in ear acupuncture (incl. equipment) | COMPLEMENT II The RAC | COMPLEMENT III The 10 rules of order of auriculotherapy | COMPLEMENT IV The Nogier frequencies |
|----------------|---|--|--|--|
| Content | In this complementary module, all diagnostic and therapeutic techniques of auriculotherapy including the tools necessary for them are presented. | This complementary module is exclusively about the technique of the Nogier pulse/ the RAC/ the VAS (synonyms). This technique was used by P. Nogier, but it is not mandatory to perform auriculotherapy. | There are simple orientation rules for auriculotherapy for diagnosis and therapy. These rules also answer almost all questions that arise in most therapists at the beginning of their involvement with auriculotherapy. | This module is about the superordinate application possibilities of the Nogier frequencies, i.e. their principles of action. This also includes the Nogier fields on the ear and the corresponding master points. |
| Lessons | <ul style="list-style-type: none"> • Equipment (Diagnosis and Therapy) - Human • Equipment (diagnosis and therapy) - dog and horse • Discussion of the different diagnostic methods • Discussion of the different therapy methods | <ul style="list-style-type: none"> • The RAC in medical history • RAC testing on humans • RAC testing on animals • Stimulation /Evocation methods • Science and interesting phenomena • Training the RAC | <ul style="list-style-type: none"> • Laterality • Active and silent points • Somatic and functional points • Toning or sedating? • Long and short treatment • Strong and weak point • Can points migrate? • Main point or secondary point? • Turn | <ul style="list-style-type: none"> • Nogier fields in humans and animals • Primary assignments of the Nogier fields • Superior use of the Nogier frequencies • The master points |
| Length | 2 h 10 min | 1 h 45 min | 40 min | 45 min |
| Notes | We have compiled the methods we use in auriculotherapy in a complementary module in order not to have to interrupt the thematic flow of the course (musculoskeletal system - internal organs/hormonal system - nervous system) with long excursions. In this way, you will also have everything you need to know about the methodological-technical aspect of auriculotherapy, without having to search for these sections in the main modules. | Some participants in this training have been working with RAC for a long time, some have never heard of it. For this reason we offer a separate module to learn the RAC. Yes, this is also possible via an online course with many instructions for practical practice. You don't have to be able to pulse according to Nogier to do ear acupuncture. But in the long run it makes sense - and it is certainly exciting! | You should do this short module quite soon at the beginning of the course. You will hear it only once, because the rules are simple and logical. | Since in auriculotherapy we use the Nogier frequencies directly on the ear, we have special possibilities of regulative influence, which we do not have when using them directly over the body. Because here we can use the "master points" to influence the subject or the regulatory level for which a frequency field stands. |
